Ferrotint™, Ferrispec® FP and Spectrum™ from Oxerra are unique lines of synthetic *iron oxides* and *inorganic* pigments for concrete and constructions.

Products are widely used in the pigmentation of concrete products, including architectural masonry blocks and bricks, segmented retaining walls and garden units, interlocking pavers, patio blocks, stucco, grouts, mortars, and roof tiles, as well as asphalt pavements and roads, asphalt roofing shingles, and ready-mixed concrete.

They can be safely used in amounts up to 10% by weight of cement without affecting concrete strength.

The pigments comply with following standard about pigments for colored concrete:

ASTM C979/C979M-24
EN 12878: 2014

Specification for Ferrotint™:
– Color Difference: DE<0.75
– Color Strength: 97.5%~102.5%
(compare with standard sample)

Testing Methods:
Spectrophotometer X-Rite Color I5
CIE Lab
ISO 7724-2

The shades shown here are intended as a guide. Concrete color may be influenced by a number of factors including concrete raw materials, moisture content, curing & finishing techniques, weather condition etc. that are not under our control, and we cannot guarantee. If necessary, we recommend obtaining representative samples from our regional managers or dealers of OXERRA GROUP and evaluating samples first. OXERRA GROUP will be responsible for the following: guarantee product quality regarding international standard and meet our obligations under contract.

Color that's meant to last.

OXERRA is internationally recognized as a superior manufacturer of iron oxide and other pigments for the coatings, plastics, specialties and construction industries.

Our drive to produce high-quality, unquestionably pure pigments combined with our iron-clad customer service makes us the obvious choice.
